

How to play saved videos inside the CameraMatics UI:

1. Click on My Files:

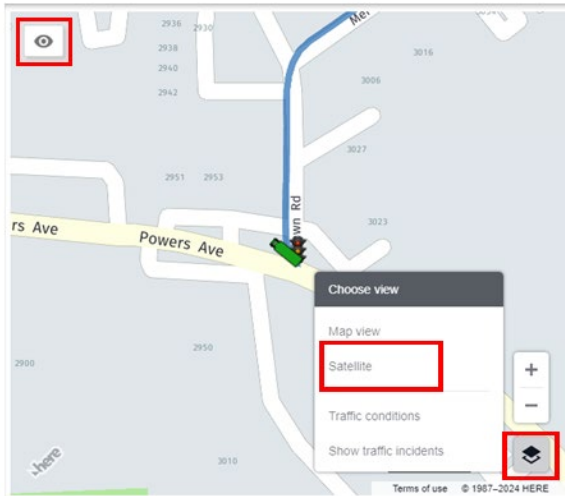

2. Select the video to load & play by clicking the dark blue play button.

The image shows a table of video files with columns: File Name, Vehicle Name, Drive, Start Time, Duration, Camera, Created At, Status, Sharing, and Actions. A red box highlights the play button icon in the Actions column for the first row.

File Name	Vehicle Name	Drive	Start Time	Duration	Camera	Created At	Status	Sharing	Actions
64_2024_03_05_14_46_20	64	-	5 March 2024 14:46:20	20s	right, left, forward, rear	5 March 2024 09:34:55	Safe	Shared	
64_2024_03_05_15_14_00	64	-	5 March 2024 15:14:00	45s	Load	5 March 2024 15:19:01	Safe	Shared	
350_2024_03_01_08_51_00	350	-	1 March 2024 08:51:00	1m 43s	load	1 March 2024 09:55:27	Safe	Shared	
44_2024_02_16_19_52_10	44	-	19 February 2024 19:52:10	30s	rear	29 February 2024 15:23:10	Safe	Shared	

3. The video(s) will load along with the overhead map view, accelerometer info and speed data.
4. I recommend you click the eyeball icon at the top left of the overhead view (to get a 3D view) and also click the map view button on the bottom right of the same window and change to satellite view.

5. You can click the map view button again to collapse the selection pane.

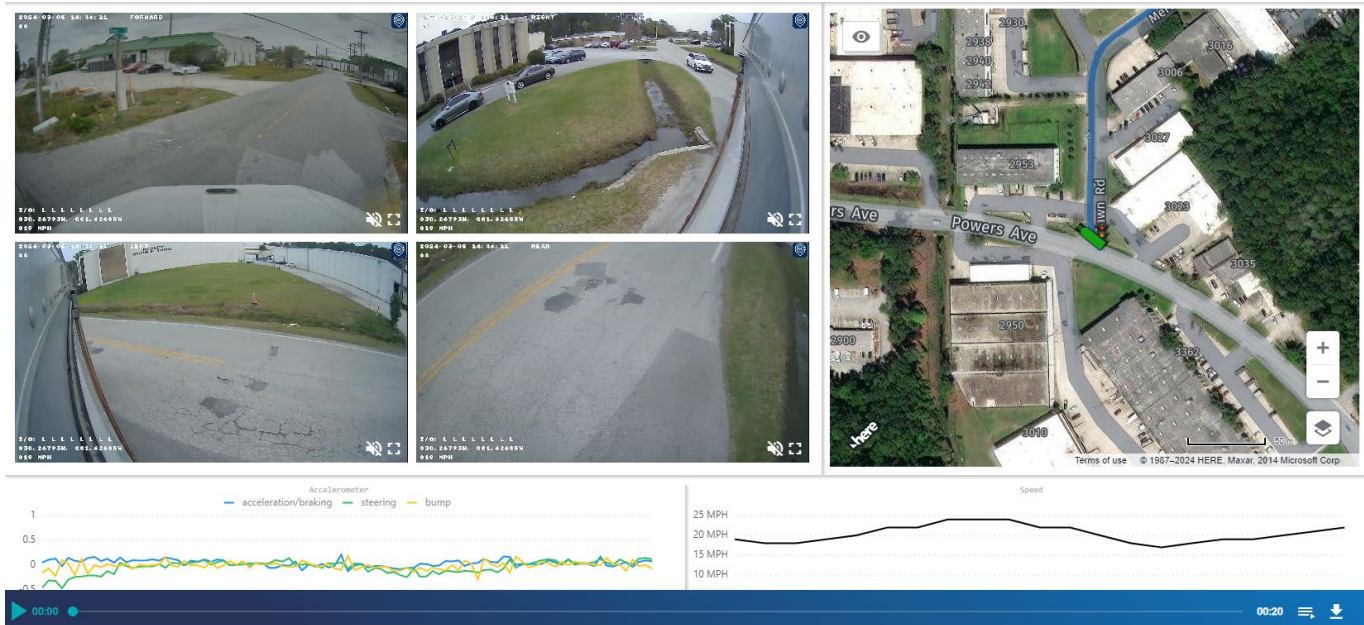

6. If you have audio recording enabled on your camera(s), you can click the speaker button to hear the audio with the video.

7. Click the play button near the bottom left of the browser window.

8. Your video(s) will now play along with the 3D overhead view, accelerometer and speed data.

9. You can also increase the size of the video playback window by clicking the zoom button on the bottom right of the video.

10. If you want to download and save the high-resolution video data to your PC locally, click the download button at the bottom right.
